

Asian flexible solar panels

Overview

This thin-film solar technology allows them to be much thinner and more flexible than standard monocrystalline or polycrystalline panels, which are made of silicon wafers that are up to 200 micrometers thick (a little thicker than a human hair) mounted on aluminum and covered. This thin-film solar technology allows them to be much thinner and more flexible than standard monocrystalline or polycrystalline panels, which are made of silicon wafers that are up to 200 micrometers thick (a little thicker than a human hair) mounted on aluminum and covered. We are a leading manufacturer specializing in high-performance flexible solar panels.
