

Battery pack failures have many causes

Overview

One of the main issues that we hear about constantly in the news is when a lithium battery pack has caught fire in a smartphone, laptop, or other device. Then the manufacturer has to institute a massive recall for the battery packs. In these rare instances, the failure was due to metallic microscopic particles that. Puncture and leakage can be found all throughout the shipping and transportation process, as well as when end users handle lithium battery. You may notice that the battery enclosure is large and bulging. This problem is caused by the lithium battery swelling. Swelling can occur for a. One of the most common failures is the result of the battery pack overheating. Overcharging the battery is one cause to heating issues. The excess charge combines with higher temperatures (such as direct sunlight). The. Using the incorrect charger for the lithium battery pack can also cause a range of problems. Most battery pack chargers for lithium-ion batteries are designed to prevent overcharging. However, using the wrong charger can cause.
