

Communication base station lithium-ion battery testing work

Overview

This document provides recommended practices for system design, storage, installation, ventilation, instrumentation, operation, maintenance, capacity testing, and replacement of Li-ion batteries. The core hardware of a communication base station energy storage lithium battery system includes lithium-ion cells, battery management systems (BMS), inverters, and thermal management components. Lithium-ion cells are the primary energy storage units, chosen for their high energy density, long.
