## Overview

Invented in 1859 by French physicist Gaston Planté, the lead-acid battery is the earliest type of rechargeable battery. In the charged state, the chemical energy of the lead-acid battery is stored in the potential difference between the pure lead on the negative side and the PbO<sub>2</sub> on the positive side, plus the aqueous. Lead-acid batteries have their own share of advantages. The following are only some of the advantages that this kind of battery boasts: 1. It is not as expensive as the other kinds of batteries. 2. It has over 140 years of development. Our website lists lead-acid batteries from established brands and manufacturers all over the world. As a result, you can expect that the lead-acid batteries that we offer are of the best variety. They are characterized by higher. The primary reason why lead-acid batteries are widely used in the solar industry is their cost per kWh. The cost per kWh for lead-acid batteries remains the most economical for residential battery-based systems. In.
