Overview

••Mobile energy storage technologies are summarized. ••. Energy is one of the driving forces for the progress of human civilization. For a long. Batteries are electrochemical devices, which have the merits of high energy conversion efficiency (close to 100%). Compared with the ECs, batteries possess high capacity an. Similar to batteries, fuel cells can convert chemical energy of fuel (H₂, methanol, etc.) and oxidant (O₂) to electric energy through electrochemical reactions.¹²³ Yet unlike batteries, they d. Although batteries and fuel cells have the advantages of high energy density, they suffer from sluggish kinetics and irreversible variation of electrode materials, leading to low power densit. Dielectric capacitors charged and discharged by electric-field-induced dielectric polarization and depolarization possess high power density (~10⁴–10⁷ W/kg) (Figure 1D).
