

Generator wind temperature is too high or too low icon

Overview

In this guide, you'll learn straightforward steps to identify and fix problems with your generator's temperature sensor. Operating in extreme ambient temperatures. Limited airflow around the generator, particularly if the installation area does not meet clearance requirements. This can cause. Hello, next generator issue, the issue here is it will run fine for approx 1 hour and then it shuts down with error 1400 high temp. I read through the forum a bit and found where some said to meter the temp sensor to see if it is shorted, and with the sensor installed, but the wires disconnected. Is your generator acting up, and you're suspecting the temperature sensor might be the culprit?

You've come to the right place! A faulty temperature sensor can cause your generator to malfunction, leading to unexpected shutdowns or even costly repairs. Leaks can also occur when the base tank is overfilled, whether.
