

Hazardous waste batteries

Overview

In the United Kingdom (UK) batteries and accumulators are regulated to help protect the environment through the Waste Batteries and Accumulators Regulations 2009 (as amended) – the underpinning legislation. An automotive battery is of any size or weight and used for one of the following purposes: 1. The manufacturer or importer that first places batteries on the UK market – including those in products – is classed as the producer and is therefore responsible for compliance. The specific obligations in relation to waste batteries depend on their type, but all require registration with the appropriate environmental regulator via the National Packaging Waste. OPSS has been appointed by Defra to enforce the regulations in the UK in relation to the: 1. compliance of producers of automotive and industrial batteries 2. take back scheme for. If you have a specific enquiry about compliance or wish to contact us regarding suspected non-compliance please email.
