

# How big an inverter should I use for a 25kW solar panel

## Overview

Generally, it's recommended to size the inverter to 80-100% of the DC system's rated capacity. Before determine the inverter size, the most important thing is to calculate your average daily power consumption (kWh) and calculate your solar panel array size to match your power. Choosing the right solar inverter size is critical—and one of the most common questions: what solar inverter size do I need?

Whether you are installing a rooftop system in California, powering a remote cabin in Alberta, or sizing for a community center in Rajasthan, getting it right means. Your inverter size should match your solar array's capacity, not your electricity bill. Let's say you have a 6kW solar array (twenty 300-watt panels). You could. The size of the inverter for solar power depends on the total capacity of your solar panels (in kilowatts, kW) and their expected output under typical conditions. Expect to pay \$1,000 to \$3,000 to install a new solar inverter if your current one is undersized or oversized and causing power losses. Along with the solar panels' total power, factors like future expansion plans, partial.
