

How does EMS navigate to the communication base station

Overview

A base station must be located at a high point or on a tower to maximize its radio transmission range. This elevation ensures that the radio waves can travel further, resulting in better connectivity between the mobile units in the field and the dispatch center. Communication in EMS is essential. Patients must be able to access the system, the system must be able to dispatch units, EMTs must have a means of communicating with medical direction and receiving facility, and EMTs must be able to communicate vital information to other personnel.
