

# Installing solar power generation in abandoned houses

## Overview

In this video I install a solar panel and show how it works in an abandoned mountain house. I also improve my small bath house, build a warm shelter for cats, share plans for a future micro hydro power system using a mountain stream, show drone views, winter life, and how I deal with snow while. We have an abandoned house (trailer) on our property that hasn't been lived in for 10 years. We tried to give it away twice, but both times, it fell through. and then a tree fell through it, so we've accepted that the house will likely sit there until it rots away. Conversely, an installation that negatively impacts the historic character of a property will not meet the Standards. But. Retrofitting solar panels on older homes requires knowledge of the home's unique characteristics and careful adaptation of solar technology. Adding solar panels reduces electricity bills by generating onsite. Can you have the best of both worlds—preserve the charm of your historic building and embrace the future with solar panels?

The short answer is yes! But like all good things, it requires a little finesse. Historic buildings are like fine wine—they can improve with age. Older roofs often use traditional or handmade materials — like slate, clay tiles, or Yorkshire stone — which leads many people to believe solar is off.
