

## Level 3 charging speed

### Overview

Level 3, also called DC fast charging, delivers high-power direct current that tops up an EV far faster than Level 2—typically from about 50 kW up to 350 kW. Sounds complex?

Let's break it down. The electricity grid supplies alternating current (AC) power, while your. Level 1 uses a 120V household outlet, adding about 3-5 miles of range per hour, ideal for overnight or low-mileage drivers. Level 3 (DC fast) delivers 50-350 kW DC for rapid. While Level 3 chargers are less common for home use due to higher installation and hardware costs, Level 2 chargers are a great home EV charging option, now offering up to 80 amps for fast and convenient charging. With a Level 2 charger, you can power your EV overnight right at home, saving time. Charging speed depends on charger power, what your vehicle can accept, battery temperature, battery state of charge and site electrical capacity. As demand grows, many networks use data driven monitoring and automated alerts. Electric vehicles (EVs) come with a new way of fueling up: plugging in. But not all EV chargers are the same.
