

New Energy Storage Technology Report Analysis

Overview

Building on the comprehensive assessment of clean energy technology supply chains set out in ETP-2023, this year's edition offers cutting-edge analysis based on rich and detailed new data, granular surveys of industry, and a bottom-up approach to fresh modelling. Energy storage technology (ESTs) are classified based on the form of energy and their intended functions. The 2026 edition of The Energy Storage Report is out now and available to download, charting the key trends, challenges and successes in the industry. energy storage deployment, which when combined with SEIA's. For instance, in April 2024, the National Energy Administration of China issued the “Notice on Promoting the Grid Connection and Dispatch of New Energy Storage”, which provides a solid institutional foundation for the effective grid integration and optimized dispatch of advanced energy-storage. From iron-air batteries to molten salt storage, a new wave of energy storage innovation is unlocking long-duration, low-cost resilience for tomorrow's grid.
