

Pvt solar power generation heat absorption panel

Overview

Our uniquely designed PVT captures up to 84% of the available solar energy and converts it into four parts thermal and one part electrical energy. Glazed surface design to maximize heat generation. Among these, Hybrid Photovoltaic-Thermal (PVT) panels are emerging as a highly promising innovation, offering a dual approach to harnessing solar energy. Heat is harvested in the rear side. Patented insulated. Photovoltaic thermal collectors, typically abbreviated as PVT collectors and also known as hybrid solar collectors, photovoltaic thermal solar collectors, PV/T collectors or solar cogeneration systems, are power generation technologies that convert solar radiation into usable thermal and electrical. The Dualsun SPRING hybrid solar PVT panel generates both electricity (PV) on the front side and heat (T hermal) on the back side. It produces 6-8 times more energy than a standard PV panel, maximizing energy output while minimizing your carbon footprint.
