

# Solar power generation electrical system diagram

## Overview

The main part of a solar electric system is the solar panel. There are various types of solar panel available in the market. Solar panels are also known as photovoltaic solar panels. Solar panel or solar module is basically an array of series and parallel connected solar cells. The potential difference developed across a solar. In a grid-tie solar system, solar modules connect directly to an inverter, not to the load. Solar power varies with sunlight intensity, so panels don't feed electrical equipment directly. This is not desirable to overcharge and under discharge a lead acid battery. Both overcharging and under discharging can badly damage the battery system. To avoid these both situations a controller is required to attach with the. Solar panels produce DC electricity, while the grid supplies AC electricity. To use both sources for common equipment, an inverter is needed to.
