

# Supercapacitor energy storage bus

## Overview

Electric buses or e-buses represent a viable zero-emission bus option for decarbonizing urban mobility. Numerous pilots and experiments are ongoing mainly throughout Europe, Americas and Asia in order. ••Supercapacitor buses implementation was modeled in urban public. AC Air ConditioningBEB Battery Electric BusCNG. Commercial transport in Europe accounts for 40% of the harmful emissions in urban areas. More precisely, carbon dioxide (CO<sub>2</sub>) emissions from heavy-duty vehicles (including lorries. The idea of SCEB modeling is meant for assessing specific bus driving range and energy consumption. Modeling procedure shall alleviate the so-called “range anxiety” being one of the. For all known route characteristics (line length, number of stops, interstation distance, road network configuration, longitudinal road slopes. ) and operation properties (sched.
