

The maximum height of photovoltaic power generation bracket

Overview

The height of photovoltaic brackets plays a bigger role than most people realize - it's not just about keeping panels off the dirt. Let's break down the science behind finding that Goldilocks zone where your solar array isn't too high, isn't too low, but just right. of the pile is more than 0.4 m above the highest water level. Adopting above-water power generation and underwater aquaculture enables complementary development of multiple industries. The output of solar systems typically correlates with periods of high electricity demand where air conditioning systems create peak demands during hot sunny days.
