

Uninterrupted power supply self-test for communication base stations

Overview

In this article, an algorithm for automatic control of energy sources was developed to improve the uninterrupted power supply of mobile communication base stations. Based on the proposed algorithm, a simulation model was created in the Proteus program and experimental tests were conducted. Without them, communication services would falter during power outages or fluctuations. To make sure the system performs reliably in. This UFC supersedes UFC 3-520-01, dated 06 October 2015. The Unified Facilities Criteria (UFC) system is prescribed by MIL-STD 3007 and provides planning, design, construction, sustainment, restoration, and modernization criteria, and applies to the Military Departments, the Defense Agencies, and. The invention relates to the technical field of UPS (uninterrupted power supply) battery power supply testing and particularly discloses a UPS (uninterrupted power supply) battery self-test circuit and method.
