

Using American-made outdoor single-phase cabinets for network server rooms

Overview

Climate controlled outdoor network cabinets provide a sanctuary for these devices. By maintaining a stable internal temperature, they prevent the expansion and contraction of delicate circuit boards that leads to "solder fatigue." "When your network infrastructure demands reliable outdoor protection, American Products delivers weatherproof telecom enclosures engineered for performance and built to last. The enclosures include adjustable rack space and much easier cable wiring access for server equipment. Air conditioners can be installed to provide more BTU. IP Remote Access is a feature of a KVM Switch that allows a user to monitor and control PCs, servers and other network devices remotely over IP (Internet Protocol). These rugged structures act as a protective suit of armor for the sensitive silicon hearts of our networks, ensuring that data keeps flowing. Outdoor network cabinets are designed to protect sensitive networking and server equipment in environments exposed to weather, dust, moisture, and temperature fluctuations.
