## Overview

Most solar professionals recommend sizing your inverter for solar panels between 75% and 115% of your total panel wattage, with the sweet spot around 1:1. Choosing the right solar inverter size is critical—and one of the most common questions: what solar inverter size do I need?

Whether you are installing a rooftop system in California, powering a remote cabin in Alberta, or sizing for a community center in Rajasthan, getting it right means. Your solar inverter should match your solar array's peak panel wattage, and a solar array sizing calculator helps, so 6 kW pairs with 6,000 watts. Expect to pay \$1,000 to \$3,000 to install a new solar inverter if your current one is undersized or oversized and causing power losses. This means your inverter doesn't need to power your entire home—it just converts whatever your panels generate. If panels are far below inverter rating, efficiency may drop.
