

Wind power and photovoltaic power generation projects to be abolished

Overview

Our analysis reveals that 1,891 power projects with a combined 266 GW of generation capacity have been canceled in 2025 —equivalent to roughly one-quarter of America's entire current electricity generation capacity. The Ivanpah Solar Generating Project was the first large-scale solar project on U. A new Interior Department. Residents and local restrictions are delaying and blocking renewable energy projects in the United States at an accelerated rate, according to a study from Columbia University. Renewable companies fear that projects will no longer receive permits that were once normal course of business. This follows the passing on Trump's One Big Beautiful Bill Act, which seeks to expand the fossil fuel and nuclear power sectors while also halting renewable. On his first day in the Oval Office, President Donald Trump signed an executive order that attempts to slow the growth in the country's wind generation capacity.
